Structure	Layered cut protection Cut protection material
Mode of action	Decelerating and blocking

application field

Year-round forestry work, in particular with a chainsaw, for work where the need for type C pro-tective trousers has been identified in the risk assessment.

Wearing time during the tests totalled 405 days of use at all test sites.

	Feature	Result
Cut protection trousers "Ventilation"	Wearing properties	-
	Durability	+/++
	Equipment	+/++
	Care	+/++
Overall rating		**good to very good**

+ + = very good; + = good; o = satisfactory; - = sufficient; - - = inadequate

Brief characteristics from the wear test

Sturdy, but heavy and warm cut-resistant trousers in Form C.

Individual details from the product tests

Test feature	Data (+)	Data (-)
Wearing properties		Due to the normative requirements, type C trousers are very heavy, warm and stiff and intended for temporary use under special conditions.
Durability	Very good; the Kevlar outer fabric is extremely tear-resistant.	The seam on the inside of the right leg cuff came undone once
Equipment	Very good, the leg cuffs (snow guard) were rated very positively - reduced penetration of dirt and cold air.	
Care	Very good; the outer fabric is highly dirt-repellent.	

Certificates and declarations on social and environmental sustainability

The manufacturer provides the following certificates and declarations:

- No certificates or declarations are available.
